

ABOUT PFISTER ENERGY

Our Company

Pfister Energy is a leading turnkey developer and installer of renewable energy projects throughout the United States.

We specialize in both community solar projects that create significant revenue streams for property owners with no out-of-pocket costs, as well as behind-the-meter solar and battery storage projects for businesses looking to save on electricity bills, consume on-site clean energy and improve resiliency. We help our customers monetize available energy credits (RECs) and lucrative tax incentives offered by the Federal Government.

Founded in 2005 and having installed over 750 MW of solar, our vertically integrated team's depth of experience allows us to offer the most competitive rates and deliver the highest quality projects.

Industry Advantages

Extensive knowledge of regulatory environments, direct origination, project development, engineering, permitting, procurement, project management, installation, system commissioning, operations/maintenance and in-house financing

A crew of more than 100 NABCEP-certified local installers and electricians

Wide-reaching construction experience including projects in Maryland, New Jersey, New York, Connecticut, Florida, and more

Success building rooftop, parking lot, and ground-mounted solar arrays

Delivery of additional renewable technologies such as battery energy storage, EV charging, energy management systems, and microgrids

Completed projects with Fortune 500 companies, major universities, top real estate companies, and the United States government
